# Administration of Medication

## Administration of Prescribed Medication during School Hours

In keeping with the Ministry of Education Policy/Program Memorandum #81, no employee of the Superior North Catholic District School Board shall be required to administer a medical procedure for which he/she has not been properly trained.

### Procedures

1. It is understood that it is preferable that all medication be administered by the parent/guardian at home during non-school hours.
2. The parent/guardian of the student will request and authorize the oral administration of prescribed medication to the student using the prescribed form.
3. The parent or guardian will agree to send no more than one month's dosage to the school at any one time.
4. The parent or guardian will agree that if problems arise with the administration of the medication; for example, (including without limitation) refusal by the student to take the medication, complaints of side effects, or possible allergic reactions, then the school will immediately discontinue further doses and inform the parent/guardian, at the earliest practical opportunity, as to the nature of the problem. It is then the parents'/guardians' responsibility to decide if the student's physician needs to be consulted to assess whether changes to the prescribed medication and/or administrative procedures referred to below, are necessary. A new copy of the Board approved medication form must be completed for any change in the medication.
5. The school principal can reserve the right to refuse to administer treatment to the student if the necessary information is not provided by the parent/guardian.
6. It is the responsibility of the principal or her/his appointee, to ensure that:
  - a. The medication is kept in a safe and secure place.
  - b. The medication is adequately identified and in a pharmacy container for that medication.
  - c. The specific medication instructions are followed.
  - d. There is no evident reason to seek further information from the parent/guardian, physician, or pharmacist.

- e. An accurate record of medication administration is kept on the required form.

## Medical Procedures - Anaphylaxis

While it is impossible for the Superior North Catholic District School Board to ensure an environment free of allergens, school settings depend on the cooperation and support of all stakeholders in the school community.

“Anaphylaxis”, as defined by Sabrina’s Law, 2005, means a severe systemic allergic reaction which can be fatal, resulting in circulatory collapse or shock, and “anaphylactic” has a corresponding meaning. Anaphylactic shock or reaction can occur as a result of exposure to only minute amounts of an allergen being present in an environment. Common allergens include food (the most common being peanuts), insect venom medications, latex and rarely, exercise (see forms 1 to 6 and Appendices F & G).

## Information and Awareness

### Parents Or Guardians Responsibilities

Parents or guardians with anaphylactic children have the responsibility to identify their children to the principal and to provide information regarding:

- The allergens which trigger the reaction.
- A ‘Medical Alert Planning Form and Request For Medication Administration’ signed by the child’s physician.
- Any changes in the child’s condition from previous years or since last reported.

Anaphylactic students should wear Medic Alert bracelets which identify the specific allergens.

Parents or guardians are responsible for providing validated adrenaline auto-injectors for their children.

### Identification of Anaphylactic Students To Staff

All staff members (teaching, administration and support staff including bus drivers) should be made aware that a child with life threatening allergies (anaphylaxis) is attending their school and the child should be identified.

Instructions on the use of the auto-injector (such as Epi-pen) should be posted along with a list of symptoms and emergency procedures in clearly visible locations. The auto-injectors must be stored in a covered, secure, unlocked area for quick access.

The classroom teacher should ensure that information regarding anaphylactic children is in a highly visible place and is readily accessible and understandable by teachers on call and occasional teachers.

The school in consultation with the parents or guardians, should decide whether information and/or a picture should also be placed in the children's classroom and other locations such as the school bus.

### **In-Service For Teachers & Other Staff**

In schools where anaphylactic children are enrolled, in-service should be provided on an annual basis to all those working with or involved with the anaphylactic children.

- This includes school personnel, occasional teachers, bus drivers and volunteers.
- They should be in-serviced on how to recognize and treat anaphylactic reaction, on school procedures to protect anaphylactic children from exposure and on school protocol for responding to emergencies.
- Auto-injectors are only to be used for students who have been previously diagnosed with an anaphylactic condition.

The assistance of public health nurses in developing in-service may be utilized.

### **Sharing Information With Other Students & Parents Or Guardians**

The school should inform students and parents or guardians of the presence of students with life threatening allergies in their school and the measures to be taken to protect those students.

A letter should be sent home to parents or guardians at the beginning of the school year requesting that parents or guardians cooperate with any measures that are being taken to protect anaphylactic children.

## Avoidance

Peer relations play an important role in students' lives. Schools are encouraged to find innovative ways to reduce the risk of exposure without impeding or unduly restricting the activities of anaphylactic children or other students.

### Providing An Allergen Free Area

Where possible, schools should establish an eating area or part of a room as 'allergen free'.

If an allergen free area cannot be designated, an eating area for the anaphylactic children needs to be provided by the school.

Encourage anaphylactic children to take precautions at mealtimes such as washing hands before and after eating, not sharing food, utensils, or food containers with other students, and not putting food directly on the desk. Schools should try and ensure that the eating surface is cleaned appropriately.

Anaphylactic students should not be permitted to eat snacks provided by the teacher or other parents or volunteers. As a protective measure, only allergen free snacks provided by the student's family should be given to the anaphylactic child.

### Allergens Hidden In School Activities

Schools should take precautions during holiday and special celebrations and in the planning of extra-curricular events and field trips:

This includes making all supervisors, staff and parents or guardians on a field trip or at an extra-curricular event, aware of any anaphylactic children involved.

Having at least one supervisor who has training in the use of an auto-injector.

The auto-injector should be brought by the parent if they are with the student or by the supervisor if the parent is not on the trip or part of the event.

Students may wish to carry the auto-injectors themselves. If this is the case, parents and/or students are responsible for informing the supervisor of the location of the auto-injector.

Staff should be aware of other possible sources of allergens including such items as play dough, beans and peas for counting, 'bean' bag chairs and stuffed toys (peanut shells are at times used).

In addition, anaphylactic children should not be involved in garbage disposal, cleanups or other activities which could bring them into contact with such items as food wrappers, containers or debris.

### Emergency Response

Even when precautions are taken, it is still possible that an anaphylactic child will come into contact with an allergen while at school or at a school event. An individualized emergency plan should be developed for each anaphylactic child in consultation with the school public health nurse and the child's physician. Usually, anaphylactic children know when a reaction is taking place. It is essential that school personnel listen to the child. If the child complains of symptoms which are indications of the onset of a reaction, school personnel should not hesitate to implement the emergency plan. Reactions cannot be too quick, but can be too slow.

### Emergency Plans

The emergency plan should include procedures to:

- Communicate the emergency rapidly to a staff person who is trained in the use of the auto-injector.
- Administer the auto-injector. (Note: Although most anaphylactic children learn to administer their own medication by about age 8, individuals of any age may require assistance during a reaction because of the rapid progression of symptoms, or because of the stress of the situation. Adult supervision is required.)
- Telephone 911 and inform the emergency operator that a child is having an anaphylactic reaction.
- Transport the child to the hospital at once.
- Telephone the hospital to inform them that a child having an anaphylactic reaction is enroute.
- Telephone the parents or guardians of the child.
- Re-administer the epinephrine every ten to fifteen minutes while waiting for the ambulance and enroute to the hospital, if breathing does not improve or if symptoms reoccur.
- Assign a staff person to take extra auto-injectors, accompany the child to the hospital, and stay with them, until a parent or guardian arrives.

ADMINISTRATION OF MEDICATION -- PARENT REQUEST FOR STAFF TO ADMINISTER MEDICATION

1) Name of Child/Pupil: \_\_\_\_\_

## IDENTIFICATION OF STUDENTS SEVERE ALLERGIES

*This form is to be completed by the parent of the child with an allergy and returned to the school Principal. The purpose of collecting this information is to identify children whose parents/ guardians will need to provide further medical information.*

Dear:

You have indicated that your child, \_\_\_\_\_, has been diagnosed as having an allergy/allergies to \_\_\_\_\_.

**Please complete the questions below and return this form to the Principal.**

1) My child has an allergy to:

Insect Sting (Please Specify)

Drug (Please Specify)

<input type="checkbox"/> Food:	Peanuts	<input type="checkbox"/> Yes	<input type="checkbox"/> No
	Other Nuts	<input type="checkbox"/> Yes	<input type="checkbox"/> No
	Fish	<input type="checkbox"/> Yes	<input type="checkbox"/> No
	Shellfish	<input type="checkbox"/> Yes	<input type="checkbox"/> No
	Other (Please Specify)		

Latex

Other (Please Specify)

2) My child has been hospitalized with a severe allergic reaction.  Yes  No

3) My child has been prescribed an EpiPen.  Yes  No

**Appendix F**

**EPIPEN PROCEDURES**

Using the EpiPen Autoinjector device (adrenaline, epinephrine) to treat severe allergies - a pictorial guide.

Adrenaline (epinephrine) is a natural hormone released in response to stress. It is a natural "antidote" to the chemicals released during severe allergic reactions triggered by drug allergy, food allergy or insect allergy. It is destroyed by enzymes in the stomach, and so needs to be injected. When injected, it rapidly reverses the effects of a severe allergic reaction by reducing throat swelling, opening the airways, and maintaining blood pressure.

Use of adrenaline for treating anaphylaxis is ***First Aid***.

Intact (top) and dismantled EpiPen (below) to show the spring, needle and syringe that is enclosed within the device.

## Appendix F-2

Remove the device from the plastic protective container.

Remove the **grey cap**

from the fatter end of the device.

NB: This "arms the unit"

ready for use.

**Hold** the EpiPen in your fist with clenched fingers wrapped around it.

NB: there is nothing to "push" at the white end.

Press the **black tip** gently against the skin of the mid thigh, then start to push harder until a loud "click" is heard. **This means that the device has been activated.**

Hold in place for 10-15 seconds (count "1 elephant, 2 elephants, 10 elephants, etc.") while the adrenaline is injected under pressure.

NB: The EpiPen "pop" is often quite loud.

Appendix G

# EpiPen *Mistakes*

## - what *not* to do!

### MISTAKE NUMBER 1

The black tip contains the needle and needs to be placed against the mid-thigh.

*Holding the wrong end and injecting the thumb (line) is painful and not very effective ...*

### MISTAKE NUMBER 2

Unless the grey cap is removed ([line](#)), the EpiPen will NOT work, no matter how hard you push .....

## MISTAKE NUMBER 3

This photograph is more subtle. The patient is pressing the white end very hard (line), assuming there is a "button" at the white end. There is not!

Unless pressure is exerted at the black end, the EpiPen will not work. By all means rest the thumb on the white end, but you must exert pressure on the black tip into the thigh as well.

## Appendix H

### **SABRINA'S LAW, 2005 (S.O. 2005, CHAPTER 7)**

#### **Definitions**

1.(1) In this Act,

"anaphylaxis" means a severe systemic allergic reaction which can be fatal, resulting in circulatory collapse or shock, and "anaphylactic" has a corresponding meaning; ("anaphylaxie", "anaphylactique")

"board" means a district school board or a school authority; ("conseil")

"consent" means consent given by an individual with the capacity to provide consent to treatment for the purposes of the Health Care Consent Act, 1996; ("consentement")

"employee" means an employee of a board who regularly works at the school, in the case of a school operated by the board. ("employé") 2005,c.7,s.1(1).

#### **Expressions Related To Education**

1.(2) Expressions in this Act related to education have the same meaning as in the Education Act, unless the context requires otherwise. 2005,c.7,s.1(2).

#### **Establishment Of Policy**

2.(1) Every board shall establish and maintain an anaphylactic policy in accordance with this section. 2005,c.7,s.2(1).

#### **Contents of Anaphylactic Policy**

2.(2) The anaphylactic policy shall include the following:

1. Strategies that reduce the risk of exposure to anaphylactic causative agents in classrooms and common school areas.
2. A communication plan for the dissemination of information on life threatening allergies to parents, pupils and employees.
3. Regular training on dealing with life threatening allergies for all employees and others who are in direct contact with pupils on a regular basis.
4. A requirement that every school principal develop an individual plan for each pupil who has an anaphylactic allergy.
5. A requirement that every school principal ensure that, upon registration, parents, guardians and pupils shall be asked to supply information on life threatening allergies.

## **Appendix H-2**

6. A requirement that every school principal maintain a file for each anaphylactic pupil of current treatment and other information, including a copy of any prescription and instructions from the pupil's physician or nurse and a current emergency contact list. 2005,c.7,s.2(2).

### **Contents of Individual Plan**

- 2.(3) An individual plan for a pupil with an anaphylactic allergy shall be consistent with the board's policy and shall include:
1. Details informing employees and others who are in direct contact with the pupil on a regular basis of the type of allergy, monitoring and avoidance strategies and appropriate treatment.
  2. A readily accessible emergency procedure for the pupil, including emergency contact information.
  3. Storage for epinephrine auto-injectors, where necessary. 2005,c.7,s.2(3).

### **Administration of Medication**

- 3.(1) Employees may be preauthorized to administer medication or supervise a pupil while he or she takes medication in response to an anaphylactic reaction, if the school has up-to-date treatment information and the consent of the parent, guardian or pupil, as applicable. 2005,c.7,s.3(1).

### **Obligation To Keep School Informed**

- 3.(2) It is the obligation of the pupil's parent or guardian and the pupil to ensure that the information in the pupil's file is kept up-to-date with the medication that the pupil is taking. 2005,c.7,s.3(2).

### **Emergency Administration of Medication**

3.(3) If an employee has reason to believe that a pupil is experiencing an anaphylactic reaction, the employee may administer an epinephrine auto-injector or other medication prescribed to the pupil for the treatment of an anaphylactic reaction, even if there is no preauthorization to do so under subsection (1). 2005,c.7,s.3(3).

### **Immunity**

3.(4) No action for damages shall be instituted respecting any act done in good faith or for any neglect or default in good faith in response to an anaphylactic reaction in accordance with this Act, unless the damages are the result of an employee's gross negligence. 2005,c.7,s.3(4).

### **Common Law Preserved**

3.(5) This section does not affect or in any way interfere with the duties any person may have under common law. 2005,c.7,s.3(5).

(4) Omitted (provides for coming into force of provisions of this Act). 2005,c.7,s.4.

(5) Omitted (enacts short title of this Act). 2005,c.7,s.5.
